PROFESSIONAL SUMMARY

Dedicated Software Engineer (Android & Flutter) with 2.5+ years of experience specializing in native Android (Kotlin & Java) and Flutter (Dart). Proven track record of building and optimizing production-ready mobile applications using Clean Architecture, MVVM, Jetpack Compose, and XML. Skilled in REST API integration (Retrofit/OkHttp), database management (Room/SQLite), and Firebase services in Agile environments.

TECHNICAL SKILLS

- **Android Native Development:** Android SDK, Kotlin, Java, Jetpack Compose, XML Layouts, Responsive UI, Material Design
- **Architecture & Design:** Clean Architecture, MVVM, SOLID Principles, Repository Pattern
- **State Management & Async:** StateFlow, LiveData, Kotlin Coroutines, Flow
- **Networking & Integration:** REST APIs, Retrofit, OkHttp, JSON Parsing
- **Database & Storage:** Room Database, SQLite, SharedPreferences, DataStore, Firebase Firestore
- **Firebase Services:** Firebase Authentication, Firebase Cloud Messaging (FCM), Firebase Analytics, Firebase Crashlytics
- **Flutter & Cross-Platform:** Flutter SDK, Dart, Riverpod, Provider, Dio, Localized Layouts, Flutter Secure Storage
- **Tools & Platforms:** Android Studio, IntelliJ IDEA, VS Code, Postman, Gradle, Git, GitHub, Jira, Trello
- **Methodologies:** Agile, Scrum, Peer Code Reviews, Sprint Planning, Task Estimation, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Junior Software Engineer

Nascenia Limited | Dhaka, Bangladesh

September 2023 – Present

- **Android & Mobile Development:** Build, optimize, and maintain responsive native Android and Flutter applications in production, collaborating within a 4-member agile mobile team.
- **IoT & Hardware Integration:** Engineered the native Android **Weighing Scale App** in Kotlin, implementing real-time Bluetooth communication with industrial scales to stream, parse, and display weight measurements.
- **Production Support & Maintenance:** Support high-traffic telecom apps **My Robi** and **My Airtel BD** (millions of users) by refactoring legacy UI layouts (XML), resolving bugs, and optimizing native features in Kotlin.
- **Networking & Architecture:** Restructured networking layers using Retrofit and OkHttp, and managed application state (StateFlow, LiveData) to optimize API communications and data parsing.
- **Cross-Platform Contributions:** Co-developed Flutter-based projects, implementing Clean Architecture with Riverpod for **Shojja Hospital** and Provider state trees for **CZM Zakat** and **Biyeta Matrimony** apps.

NOTABLE PROJECTS

Weighing Scale App (Industrial Weight Measurement Utility)

Technologies: Android SDK, Kotlin, Bluetooth API, XML, Background Threads

- **Project Overview:** Native Android utility establishing Bluetooth connections with external scale hardware for automated weight tracking.
- **Key Contributions:** Managed Bluetooth lifecycle and data streaming; built a persistent background connection service with auto-reconnect logic to prevent crashes.

My Robi (Self-Care Telecom Application)

Technologies: Kotlin, XML, MVVM, REST API, Retrofit, OkHttp

- **Project Overview:** Self-care mobile telecom application in Bangladesh with millions of users managing balances, data packs, and customized plans.
- **Key Contributions:** Refactored legacy UI components using Kotlin and XML, resolved critical visual lag and crash bugs, and optimized API integrations under MVVM architecture.
- **Business Impact:** Improved application stability and enhanced the self-care experience, contributing to higher user satisfaction and retention.

My Airtel BD (Self-Care Airtel Subscriber App)

Technologies: Kotlin, XML, MVVM, REST API, Retrofit, OkHttp

- **Project Overview:** User-friendly self-care mobile telecom application for Airtel BD subscribers enabling balance tracking, recharges, and purchases.
- **Key Contributions:** Integrated promotional campaign screens, refactored network data bindings for balance checking, and resolved cross-device rendering issues.
- **Business Impact:** Facilitated stable production releases that increased customer engagement and overall usability of the self-care application.

Shojja Hospital (Mobile App for Hospital Ecosystem)

Technologies: Flutter, Dart, Riverpod, Firebase FCM, REST API, Localization

- **Project Overview:** Multi-tenant Flutter mobile client designed for a comprehensive hospital ecosystem featuring patient authentication and notification dispatch.
- **Key Contributions:** Built secure OTP-based authentication via REST APIs, configured multi-language localization, and handled offline data caching using Dio and Riverpod state providers.

CZM Mobile App (Zakat Mobilization Platform)

Technologies: Flutter, Dart, Provider, Retrofit, REST API

- **Project Overview:** Transparent Zakat fund mobilization and distribution Flutter platform for beneficiaries and donors.
- **Key Contributions:** Integrated REST APIs using code generation and refactored Provider state trees to ensure layout responsiveness and efficient data loading.

Biyeta (Matrimonial & Matchmaking App)

Technologies: Flutter, Dart, Provider, Retrofit, REST API

- **Project Overview:** Trusted matchmaking and matrimony Flutter mobile application featuring profile setups and matchmaking workflows.
- **Key Contributions:** Developed dynamic profile setup modules, updated navigation structures, and resolved nested profile list rendering and image loading constraints.

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science & Engineering

Northern University Bangladesh | Dhaka, Bangladesh

2024 – Present (Expected Graduation: 2027)

Diploma in Engineering in Computer Science Technology

Rajshahi Polytechnic Institute | Rajshahi, Bangladesh

2018 – 2022

· **CGPA:** 3.54 / 4.00

CERTIFICATIONS & TRAINING

- **Android App Development (3-Month Professional Program)**
Creative IT Institute | Dhaka, Bangladesh | Completed December 2022
